Detect-A-Leak

Please join us to make sure you don't have any leaks on your property. It's easy to do, and in most cases, homeowners can fix leaks without a major financial investment. Remember, a leaky faucet that drips at the rate of one drip per second can waste more than 3,000 gallons of water per year – enough water for 180 showers. Follow these easy steps to check for leaks:

- Visually inspect faucets, pipes, and plumbing fixtures. Listen for the sound of running water – many leaks can be detected by sound and sight.

- Drop a dye tablet* in your toilet tank as a quick and easy way to identify leaks. If color appears in the toilet bowl without flushing, you have a leak.

- Twist and tighten pipe connections. Save even more water without a noticeable difference in flow by installing a WaterSense labeled faucet aerator or showerhead.

- Examine your lawn for wet spots where the grass seems greener. This could mean a broken underground pipe.

- If you believe your water meter is leaking, do not open the meter box. Instead, call the Board of Water Supply at 748-5000.

- Create your FREE personalized WaterSmart account to receive high usage alerts and leak detection tips. Go to **hbws.me/ws** to create an account.
